

Assignment No.: 04

Q.1) What is jQuery?

→ jQuery is a fast, lightweight and feature-rich Javascript library that simplifies HTML document traversal, event handling, animation and AJAX interactions. It allows developers to write less code while achieving more functionality compared to plain Javascript.

Key Features of jQuery:

- Simplifies DOM manipulation (`$(selector).action()`)
- Handles event efficiently.
- Support AJAX for dynamic content updates
- Provides built in animations and effects
- Cross browser compatible.

Q.2) What is AWS

→ AWS (Amazon Web Services) is a cloud computing platform provided by Amazon, offering a wide range of cloud services, including computing power, storage, databases, networking & Machine learning and security. It allows businesses and individuals to run application and store data on the cloud without managing physical infrastructure.

Key AWS services:

- EC2 - Virtual Cloud servers.
- S3 - Scalable Object Storage
- RDS - Managed Relational Data
- Lambda - Serverless computing.
- VPC - Virtual Networking
- DynamoDB - NoSQL Database
- CloudFront - Content delivery network.

Q.3) What is ~~AW~~ AWS Beanstalk?

→ AWS Elastic Beanstalk is a platform as a service offering that allows developers to enjoy deploy and manage application in the AWS cloud easily.

Key Features of Elastic Beanstalk:

- Support Multiple languages: Java, .NET, PHP, Python, Ruby, Go and Docker.
- Handles deployment automatically: No need to manually configure AWS services
- Auto-scaling: Automatically scale resources up or down based on demand.
- Monitoring and logging: Integrated with AWS CloudWatch for performance tracking.
- Custom environment configurations: Modify environment variable, load balancers, and instance setting.
